RJ Construction Now brings you Solar Hot Water Heating

Solar Thermal Collector

Solar Hot Water Heating; 'Theoretically' How Does It Work?

Think about the shallow water in a lake; it's usually warmer at the bottom than at the top. Why? The sunlight heats the shallow areas of the bottom of a lake, which then heats the water.

Natures own solar water heating system!

This basic system works much the same way to heat water used in buildings & swimming pools.

Solar Hot Water Heat Package

Storage Tank

1. One 80 gallon storage tank
2. Two 15 Tube Collectors & Stands
3. One Pump
